

**Amendments to the Abstract:**

Please replace the abstract with the following new abstract:

A device for fastening cable is provided, the device including a base having a carrier part for holding the cable. A first connecting unit includes a sleeve connected to the carrier part, and the device further includes a second connecting unit comprising a guide part connected to the carrier part and a holding part releasably engageable with the guide part. The guide part includes an outer sleeve that defines a guide cavity for receiving the holding part. The guide cavity has a cross section that is longer in the longitudinal direction than in the transverse direction. The holding part includes an inner sleeve having a smaller diameter than the diameter of the outer sleeve. The inner sleeve includes at least one engagement element that engages at least one engagement element on the outer sleeve to fasten the cable to the carrier part.
